

COMPANY BRIEF:

Our founder (Avi) has been in the adult industry for over 30 years. He started in 1991 as a shipper in the warehouse of a porn distribution company (back when it was VHS). About a year later, he was offered a sales position in a different distribution company. In 2012, the company closed down and everyone was let go. However, in the 20 years he was there, he created long-lasting business and personal friendships with the amazing people in the industry. Fast forward 2 long, brutal years, and Femme Funn was created in 2014. At the time, it was only Avi, his wife, 4 products, and 2 long-time employees from his previous company that he refused to abandon. Funn Fact: Both of those original employees are still with the company today (working 25s+ years with Avi). In 2015, Avi revolutionized the market with a bullet vibrator that the world had never seen – the Ultra Bullet, which still remains the best seller to date, over 8 years later!

PRODUCTS:

ULTRA BULLET

When the Ultra Bullet launched back in 2015, it was the first-ever fully silicone bullet vibrator (both inside and out). The innovative design completely shocked the market. In addition to its never-before-seen design, it also was the most powerful, becoming an overnight sensation. 8 years later, it is still the most powerful bullet vibrator on the market and is the best-selling product in its category in most retail stores. This product created the DNA for our brand – Power • Innovation • Fun. Those 3 pillars became the center of all products we designed from then on out.

BOOSTER RABBIT

The second product we designed was the Booster Rabbit – our spin on the traditional rabbit vibrator. At the time, it was the first-of-its-kind rabbit vibrator with a rotating motion. The innovative 360° rotation technology, paired with sensational external vibrations from the rabbit, creates a sensation of dual stimulation for a unique experience and blended orgasms. This product was also the first to feature our signature Boost Mode function, which was also revolutionary at the time and has become a trademark of our brand due to its popularity.

ULTRA RABBIT

The Ultra Rabbit is the first product we designed based on real user feedback. Because of the friendships he nurtured with his retailers for over 20 years, Avi and the Femme Funn team are able to get deep, unbiased insights from the store clerks who deal directly with the end consumers. This information is invaluable. Before the Ultra Rabbit was created, and still to this day, many rabbit vibrator designs are flawed. We were told that a lot of women would purchase rabbit vibrators and come back

frustrated that the rabbit portion was either too small, or the device was too stiff so the space between the rabbit and the insertable shaft was too small and wouldn't fit their body size or shape. To us, this was an amazing opportunity. With the Ultra Rabbit, we created a one-size-fits-all rabbit vibrator. The rabbit portion of the toy is HUGE (basically the size of a bullet vibrator), and super flexible, allowing it to comfortably and safely bend to the shape of the user. This became the Femme Funn standard for designing toys. In addition to that, we discovered that when using these toys, the product would slip out if the user released the handle. So, we created a "non-slip" dip on the shaft of the device, which holds the product in place. This innovation is something we created and use in a few of our rabbit designs.

FUNN BEADS and FUNN PLUG

Both of these products are pretty standard toys, however, they both stay true to the first pillar – Power.

MOMENTA

At first glance, Momenta looks like traditional Kegel balls, but two critical things set it apart from ALL (to the best of my knowledge) other vibrating Kegel balls in the market. Both the button and the battery are outside of the balls. The first one is pretty obvious to us but I guess not to others. How can you change the settings if the button is inside? However, the second one is actually the most important part of this toy. We are the first company to put the battery on the outside of the device so it is never inserted. This makes it far safer for the user than other devices. We do this because our designs put the customer first.

PLUA

Plua is also a pretty standard product in terms of function. It is a butt plug. However, the power is unparalleled, and the battery is designed outside of the plug so it is never inserted into the body! This is an extremely important, and often neglected, safety feature.

DIAMOND WAND

While the design is somewhat non-traditional and/or foreign, this product is actually one of our most innovative and multi-functional toys. The tip is both bulbous and pointed, so the user can really choose the intensity of the vibrations. If they want to pinpoint the exact place they want to be stimulated, they can use the tip. If they prefer to spread the vibration over a larger surface area, they can use the rounded sides of the tip. The long, textured, and flexible body and the flared base allows the toy to be safely inserted vaginally and anally.

BOOSTER BULLET

This product was created from the combination of the success of our Ultra Bullet, the growing desire for our Boost mode, and real feedback from our product testers, retailers, and end customers. As I said earlier, POWER is the first pillar of our brand. It is #1 because it is what differentiated (and still differentiates) us from our competition. It is also why our customers love our products so much. They just absolutely love the power. The Booster Bullet is essentially the Ultra Bullet with a Boost button to help users quickly get to that most powerful setting they love without having to cycle through all the 20 modes, and with a chic, discreet magnetic charging/storage case.

BOUGIE BULLET

The Bougie Bullet has the same functions as the Booster Bullet (including the magnetic charging case), but it is made from anodized aluminum. Due to its ability to retain heat or cold, anodized aluminum allows the user to experiment with temperature play. It is also a solution for people who are sensitive to silicone or want to try a new, body-safe material.

ESSENZA and CADENZA

Essenza and Cadenza are two thrusting vibrators. What separates these two products from similar devices in the market is the mechanical thrusting mechanism inside the device that allows it to function even when met with a significant amount of resistance, such as vaginal walls contracting. They function pretty much the same but Essenza has the attached rabbit piece. The angle we use to differentiate the two from each other is that Essenza is perfect for blended (internal + external) stimulation in one device, while Cadenza is great for those who prefer manual external stimulation, no stimulation, or to use the toy with a partner and give them control of the external stimulation.

CORA

Cora is super unique because of its compact size. It is basically a palm-sized thumping rabbit vibrator. The insertable section features a thumping movement that imitates the tapping motion of fingers. Much like Essenza's thrusting mechanism, Cora's thumping mechanism is designed to withstand significant force and continues to thump even when met with great pressure. This cannot be said about a lot of thumping motion devices. The icing on the cake is the extra large, extra flexible external stimulator which, like the Ultra Rabbit, is designed to accommodate a plethora of body shapes and sizes.

DENSA BULLET

The Densa Bullet is our innovative, modernized take on retro-style slim bullet vibrators. We took the slender, elongated figure, and added our own twist of dual-density silicone – proprietary LIQUISILK™ liquid silicone (100% silicone, no blend) exterior and firm silicone core. This gives the Densa Bullet an irresistibly plush and soft feel and makes it flexible, yet durable. It is also equipped with our signature boost mode which is actually more powerful than our its most powerful setting.

RORA

Rora is the first-of-its-kind, fully rotating vibrator that uses the same Vortex technology we introduced in the Booster Rabbit; in the size of a large bullet vibrator. When used externally, Rora encapsulates the clitoris, nipples, or any erogenous zone with a stimulating circular motion. When used internally, the 360° rotation hits all the right spots. It also features our new-and-improved boost mode that is more powerful than its most powerful setting.

DIONI

Dioni is a first-of-its-kind finger vibrator. Although finger vibrators have existed in the market for quite some time, there has never been one like this. From a technical perspective, Dioni offers a no-slip grip that keeps the user's finger snug and secure while using the device. Inside the cavity at Dioni's tip, there is a slight dip designed to secure the finger in place. This snug, nook-like feature is one you can't find anywhere else and is patent-pending. From a user experience perspective, we believe Dioni is the most intimate couple's toy available, combining the intimacy of fingering with stimulating vibrations.

VOLEA

Volea is not only unique in appearance, but also function. Thanks to its shape and 2 tiny but mighty motors, Volea's tips offers a completely new and innovative way to stimulate the clitoris, nipples, and other erogenous zones – fluttering. It is also super comfortable to hold, making it a great couple's toy.

ULTRA WAND, ULTRA WAND MINI, ULTRA WAND XL

To start, the Ultra Wand is the most powerful wireless wand vibrator on the market. However, that isn't even the best part. What makes the Ultra Wand one of a kind is that it is made from one singular piece of silicone, so it is completely seamless. Additionally, after 2+ years of development, we were able to create an internal vibration dampener that keeps all the powerful vibrations in the head of the wand, and not in the handle.

Because of how popular our Ultra Wand became, we decided to release a mini and extra large version. Same unparalleled power, same seamless silicone exterior, same vibration dampener, different sizes.

BALAI

Balai is the first-ever rabbit vibrator that offers a revolutionary side-to-side swaying motion designed to replicate the feeling of rubbing for a completely new wave of clitoral stimulation.

KLIO

Klio is our newest and probably most innovative rabbit vibrator to date. It features three different functions that stimulate three of the most important pleasure points in the vagina. The tip stimulates the anterior fornix (A-spot), the thumping motion lines up perfectly with the G-spot, and the external thumper stimulates the clitoris. Thanks to its superior flexibility, when fully inserted, Klio's handle can be manipulated to change the pressure of the external thumper, ranging from a pinpointing vibration, to a deep, widespread rumble.

PYRA

Pyra is the first-of-its-kind, remote controlled, suction-based butt plug. Its tapered form and rippled texture allow the user to control the pace. Comes in small and large.

DELOLA and LOLA G

Similar to Essenza and Cadenza, Delola and Lola G are identical except for Delola's rabbit attachment. They are made from super soft and plush LIQUISILK™ liquid silicone (100% silicone, no blend) on the outside, and have a firm silicone core. This makes them both super flexible, and sturdy.

VERSA COLLECTION:

The Versa collection is composed of a shiny ABS plastic bullet vibrator that fits into three unique sleeves. Each sleeve caters to different sensations and is designed to be interchanged.

VERSA P

The Versa P pairs our plastic Versa Bullet with the P sleeve. The P stands for plug, and it has a flared ring at the base so it can be safely used anally. If used externally, it can also be used as a thick, textured bullet vibrator.

VERSA T

The Versa T pairs our plastic Versa Bullet with the T sleeve. The T stands for tongue. Once the bullet is inserted and turned on, the tip of the tongue will begin to flicker, similar to how a tongue does during oral stimulation. There are also two sides to explore on this sleeve – a smooth and a textured side.

VERSA S

The Versa S pairs our plastic Versa Bullet with the S sleeve. The S stands for shaft, and is a suction-based shaft with a curved tip designed to stimulate the G-spot, P-spot, or any other pleasure point/zone. Our Versa Bullet is only 3.2 inches long, while our S sleeve is 7.5 inches long. When you insert the bullet into the S sleeve, the vibrations will travel all the way up to the tip, which speaks to the exceptional power you get with the Versa Bullet.

VORTEX COLLECTION: TURBO BALLER, TURBO SHAFT, TURBO RABBIT

The vortex collection is currently composed of three vibrators. The Turbo Baller, Turbo Shaft, and Turbo Rabbit. They are all hyper-realistic in appearance and feature our 360° rotation technology. The Turbo Baller is the most classic shape – shaft and balls. The Turbo Shaft features the shaft without balls. The Turbo Rabbit offers the traditional shape with a rabbit for added sensation. All three have a super powerful, harness-compatible suction base and a waterproof remote.

Ps. We were the first to create a 100% waterproof remote.

PIROUETTE

Pirouette is a non-phallic rendition of the Turbo Rabbit.

FFIX COLLECTION:

The FFIX by Femme Funn collection is our battery-operated line.

The FFIX BULLET is a classic shaped, smooth ABS plastic bullet vibrator.

The FFIX WAND is a classic shaped, mini wand vibrator with a silicone neck for flexibility.

The FFIX BULLET XL is a slim, retro style bullet with a silicone tip/shaft and an ABS plastic handle

The FFIX RABBIT is a traditional rabbit vibrator.
